AB - Chewing gum contains ginkgo extract as essential component. Pref.  
ginkgo extract contains either one or both of terpenes, e.g.  
ginkolide, biolalide, flavonoids, e.g. quercetins, kaempferols.  
- USE/ADVANTAGE :  
Chewing gum contains flavonoids of terpenes (bitter components), and  
is used for prophylaxis or treatment of cerebral haemorrhage or senile  
dementia. By adding ginkgo extract, faintly bitter taste and  
deodorising effect are caused.
